THE PEW BUYER'S HANDBOOK

*What to Look for in
Selecting Pews.*

You're considering a major investment
-in time and resources.

To help you, Sauder Manufacturing - the nation's leading manufacturer of church furniture - has assembled and published "The Pew Buyer's Handbook."

It's objective. It's informative. And, it's educational. A must-have, decision-making support for church buying committees.

"The Pew Buyer's Handbook" offers an in-depth look at the pew selection process:

- Why And How to Buy
- What To Look For In...
 - Materials
 - Construction
 - Installation
 - Sales Presentation Samples
- Insightful tips on...
 - The critical challenges pew builders face
 - How to judge pew suppliers
 - The DesignLink™ Fabric Coordinating System

"The Pew Buyer's Handbook." It's a complete guide for merging emotion and fact, making your job easier and more meaningful.

SAUDER®
Sharing your vision.

ABOUT THE COVER

The Islamic Cultural Center in Manhattan, comprising a mosque, assembly room and minaret, is the first built to serve the city's Muslim community. Since 46 Islamic countries supported the project, Skidmore Owings and Merrill Architects avoided distinctly national attributes and deliberately kept the design simple. Mohammad A. Abulhasan, Kuwait's representative to the United Nations and chairman of the Building Committee, encourages meditation and worship for the 2,000 people who attend the Friday morning prayer service. The adjoining 130' minaret was designed by Swanke Hayden Connell, and ground was broken in April for an education/administration building adjacent to the mosque (see page 8). Cover photo of mosque by Richard Bergmann.

A Judson Celebration

It was in 1897 that Judson Studios was established in Los Angeles by three Judson brothers and their father, William Lees Judson, a California artist who became Dean of the USC College of Fine Arts and Architecture. This year they are celebrating their centennial and opening a Judson Gallery of Art. John August Swanson, who has work in the Smithsonian, the Tate Gallery in London and the Vatican Museum, will initiate the Gallery's program. Congratulations from all of us to Judson Studios.

Interdisciplinary Teaching

Duke Divinity School and the School of Design at North Carolina State University are developing jointly offered courses for seminary and design students. Dr. Karen Westfield Tucker, Assistant Professor of Liturgics at Duke, and Dr. John Tector, Associate Professor of Architecture at N.C. State, have helped in each other's courses for the past two years. Dr. Tucker lectured in the studio on church design at N.C. State, and Dr. Tector returned the favor by lecturing to divinity students in the worship course at Duke. Conversations are underway among Duke Divinity School, N.C. State and The Duke Endowment about a jointly offered, team taught course for seminarians and design students. "The first time clergy, artists, architects and liturgical consultants meet shouldn't be at the first meeting of a building committee," notes Dr. Tucker. Those involved hope a jointly offered course will deepen the appreciation that architects and clergy have of the entire design process and contribute significantly to better buildings for religious communities.—W. Joseph Mann

In Memoriam

IFRAA members who knew Charles Pohlmann will be saddened to learn of his sudden death of a heart attack in August. All of us admired Charles for multiple reasons. He was the son and grandson of Lutheran ministers and though he designed many successful secular buildings, churches were his design favorite. In 1984 he won an award from the Minnesota AIA for his interior renovation of the Church of the Holy Redeemer and served as IFRAA's North Central Director. He

loved to sketch (you may recall seeing some of them in *Faith & Form*) and he and Christi traveled the world sketching his impressions of contemporary and ancient religious buildings. We will miss him and want to extend our sympathy to his family.

Religious Information and the Computer World

Temple Reyim in West Newton, Mass., admits that maybe only five percent of its members have access to the Internet, but believes this will rapidly change and that all congregations should have their own web page on the Internet. New religious information is routinely entered into the computer as the old is deleted.

A Remaining Sign of Hope

St. Vibiana's Cathedral in the most populous Catholic archdiocese in the U.S. will stay in its original downtown Los Angeles site and will erect a new spiritual building space for its congregation. Jose Rafael Moneo, an architect from Madrid and part-time professor at Harvard, has been chosen as the designer. There has been some criticism by preservationists about the demolition of the cathedral, which is 120 years old, but which has been earthquake damaged and is not thought to be of great architectural value. Moneo was awarded the coveted Pritzker Prize for Architecture this year.

A Symbolic Return

Margaret R. Miles received her doctorate from the Graduate Union in Berkeley, Calif., in 1977 and after a distinguished career at Harvard Divinity School, is returning to Berkeley as Academic Dean. Among several books she has written are *Visual Understanding in Western Christianity* and *Seeing is Believing: Religion and Values and the Movies*. Congratulations, Margaret.

Building for a Denomination

The historic Zephyr Point Presbyterian Conference Center at Lake Tahoe, dating from the 1920s, recently celebrated the Grand Opening of its new 31,564 sq. ft. conference, lodging and dining facility. The reconstruction, by Loving & Campos Architects Inc. of Walnut Creek, Calif., blends naturally into the surrounding mountains, quiet testimony

to the creative talent and skill required to design and construct structures in a mountain environment.

Share the Wonder with a Child

Michael J. Crosbie and Steve Rosenthal have published four books that will help you do just that. *Architecture Counts*, *Architecture Shapes*, *Architecture Colors* and *Architecture Animals*, for ages 1-5. These books are a visual delight and give adults and children an opportunity to explore and appreciate our built environment in a new way. Contact: The Preservation Press, (800) 879-4539.

A Multi-Cultural Requirement

Believing that churches and their ministers will increasingly find their mission in settings that are culturally diverse, Eden Theological Seminary in Webster Groves, Missouri, has approved two required courses in its curriculum: *Race, Religion and Ethnicity* and *Cross-cultural Counseling*. The faculty is committed to inclusion of the multi-cultural perspective in all of its courses.

An Open Door Policy

Sir Andrew Lloyd Webber thinks that "historic religious buildings are his country's greatest unsung asset," and since he was a boy has carried T. Francis Bumpers' architectural guide and visited them. Two years ago, he was frustrated when every church or synagogue he wanted to visit was tightly locked and inaccessible. So he set up an Open Trust financed with \$1.5 million of his own money so that congregations can be helped with financial hardship and security concerns. □

President's Message

By Douglas R. Hoffman, AIA
Chair, IFRAA of the AIA

On the heels of a presidential election and only four years from the new millennium, the term "historic decision-making" seems a bit overworked. Nevertheless, at the Religious Art & Architecture (RAA) Conference in New York City this October, there was some "historic decision-making." At a Saturday morning meeting in the lower prayer room of the Islamic Cultural Center, former IFRAA members voted to finalize the relationship with the AIA and become IFRAA of the AIA. Several years of planning, three years of mending and many lively, intense discussions preceded this historic decision.

A little history . . .

For those readers familiar with IFRAA (the Interfaith Forum on Religion, Art & Architecture), you know it as the predecessor organization of the AIA's Professional Interest Area on Religious Art and Architecture. You probably also know that three years ago, IFRAA agreed to a trial relationship with the AIA commencing January 1994. This permitted the AIA to operate former IFRAA programs, including regional and national conferences, the visual art and architectural design awards, audio/visuals and the IFRAA slide collection. *Faith & Form* and the IFRAA Endowment remained intact, but all other aspects of IFRAA's operations ceased, including the staff position and the lease at the old office at 1777 Church Street, N.W., in Washington, D.C.

From 1994 to the present, the IFRAA leadership continued to plan conferences, prepare newsletters and manage programs, but all under the umbrella of the AIA. This has meant significant staff commitment from AIA personnel like RAA Staff Director Jean Barber and Vice

President for Professional Practice Dick Hobbs. With their support and everyone's major efforts, we have sponsored many successful conferences over the past few years. Our line item budget has remained constant, but net annual revenues from RAA activities have carried forward to modestly increase and expand our programming.

The former IFRAA design awards program was separated from the PIA and merged with the AIA Honor Awards, and despite a bumpy start, it has increased visibility and participation in the awards program. Criticism has been leveled at the AIA because liturgical consultants and interior designers who have participated on award-winning projects have not been given proper recognition. This is being addressed by the Honor Awards Task Force and will certainly be corrected in future awards issues of *Faith & Form*.

Aside from becoming a small cog in a big wheel, the day-to-day operation of the RAA became surprisingly similar to IFRAA's. While the AIA provided a secure financial base for advance planning, we still needed active membership participation to ensure quality programming and financial success. Oft-heard complaints about not receiving mailings were compounded in the RAA structure that distinguished between architect and non-architect members. Artists, clergy, interior designers and liturgical consultants felt left out of the process and rightfully complained of secondary citizenship status.

After a volley of written concerns by our members, the AIA responded by eliminating the enrollment categories that restricted participation and membership benefits. Now any non-architect can join the AIA as an *Allied* member and receive the same benefits as an architect

member. Further, they are not obligated to join local or state chapters, and may also join other PIAs at the same cost as that for architect members.

And now, our future . . .

We made an "historic decision". . . now what? We were reminded at the membership meeting that IFRAA is what we make of it, not what the AIA does or does not do. As members, we set the agenda, elect the leadership, support the events and are the lifeblood of the organization. We each bear a responsibility to keep the ideals of the Forum and all of its predecessor organizations alive.

Since appointment to our Board of Directors frequently became an honorary title without specific tasks, we agreed to amend the structure. We divided into three groups, each with responsibilities and an agenda for action. The Advisory Group, composed of the five leadership positions within the organization, will act as the management team. It will set priorities, implement program initiatives, manage the budget and respond to AIA demands for continuing education opportunities.

A second group, entitled the Working Council, is composed of program leaders including regional directors, *Faith & Form's* editor, the design awards liaison and the chair of the 1998 biennial national meeting. The Working Council provides the day-to-day management of IFRAA programs. It will have an elected leader who sits on the Advisory Group and represents its interests in the budgeting and planning process.

A final group, auspiciously entitled the Wisdom Council, will become IFRAA's "think tank." Members of the Wisdom Council will be asked to develop new and

AN INTERFAITH EXPLORATION OF SACRED ART AND ARCHITECTURE

IFRAA Conference Report by Betty H. Meyer, Editor

Even the great city of New York, where our IFRAA Biennial Conference was held October 2-5 and where immigrants have been arriving steadily throughout the years, is undergoing the cultural change that invariably accompanies the admixture of religious beliefs and worship experiences. In fact, it was with this in mind that the theme of the conference, "An Interfaith Exploration of Sacred Art and Architecture," was chosen.

From the sound of laughter and buzz of conversation on opening night at the New York Design Center, one could feel the warmth and camaraderie of people interested in the arts. The reception was hosted by artists and manufacturers whose presentations were sophisticated and professional.

Plans had been made for us to visit outstanding places of worship for three of the world's outstanding religions. To experience these sacred spaces was to give us stimulation and content to discuss our similarities and differences and how these affect design of architectural spaces. The experiences would also give us background to listen and respond to the closing panel with more understanding and sophistication.

If we thought that the Cathedral of St. John the Divine was to allow us a nostalgic visit to our European past and the Gothic period, we were mistaken. After seeing craftsmen restoring the structure itself, we were led by side chapels dedicated to healing and AIDS; to saving the natural environment; to children and education; to poets and artists; the hungry and homeless.

IFRAA Conference participants visited the mosque at The Islamic Cultural Center in Manhattan, which is adding a school (above) to be completed in 1997. Designed by Rogers, Burgun, Shahine and Deschler Architects, the three-story, 35,000 sq. ft., privately funded structure includes 12 classrooms for students of all ages, exhibit space, a cafeteria, library and offices.

After a well-informed guide led us through the building pointing out its many works of art, Dean James P. Morton showed us intriguing photographs of Calatrava's award-winning design of "A High Garden Space for the Cathedral." We were told that the staff is much aware that it is situated in an American city in a time soon to be passing into the 21st century, and that people from all parts of the world are a part of the congregation.

Our second visit was to Central Synagogue, the oldest, continually used synagogue in Manhattan. One feels the legacy of the Near East as one enters. The carefully laid brick, gold ornamenta-

tion and lettering, and non-figurative stained glass are so artfully designed that their very multiplicity attains a unity that is conducive to thought.

An extremely well-informed archivist brought us up to date on the synagogue's history, but when one delegate asked for its present mission statement, the rabbi told us they had been experimenting with ways to bring the congregation into a less formal worship. Front pews had been removed, the organ brought down but then returned to the balcony, and the two doors of the heavy, horizontal pulpit opened for the first time ever. We saw rich areas of wood that reminded us of

the wooden synagogues of Europe, but Rabbi Frelander spoke of the congregation's responsibility to the present, rather than the past, to the deepening of its worship, to the cultivation of brotherhood both in the city and the world.

We also visited a smaller structure, Sutton Place Synagogue, which is conservative in tradition but contemporary in design (1976), using materials and artwork from Israel. Here, one felt the adherence to tradition that is also necessary to the continuance of a faith.

Many in our group had never visited a mosque, and as we approached The Islamic Center in Manhattan, our eyes were given an unforgettable visual feast. Support from 46 Islamic countries made it necessary for architects Skidmore, Owings & Merrill to cut out all national features; they deliberately used simplicity as the theme of their design. As one enters the square prayer hall, one immediately senses a tranquility and calm.

There are 12 enormous clerestory windows and a ribbed dome that seems to rest on a circle of light. Because Islamic tradition has used geometry with imagination, the architects have used geometric patterns over and over again instead of figurative representation. Women are set aside in the balcony as they listen with the others to a sermon from a staircase topped with a pulpit. The mosque is pointed toward the shrine in Mecca.

Project architect Mustafa Abadan led us through the building. Dr. Muhammed Salem Agwa is the Imam and Director, and Mohammed A. Abulhasan is a consultant from the United Nations. The four-fold mission of the mosque is to serve the Muslim community; to enlighten the American public about Islamic teachings and culture; to provide religious guidance, opinions and legal rulings to Muslim communities; and to promote understanding and friendly relations between Muslims and non-Muslims.

After our visits to the worship spaces of these three religions, we were ready to concentrate on our responses to them. As one listened to delegates' conversations, one heard remarks on the commonalities of the mission statements as expressed by the clergy. All spoke of the need to minister to 1) the individual; 2) the faith community; and 3) those of other faiths. They all spoke of the need to communicate to each other by universal symbols and that these come through art and architecture, which are insepara-

ble...or should be. They spoke of the special need for pragmatics and new directions.

An interactive panel moderated by Conference Chair Michael Berkowitz gave us a chance to focus on their responses: William J. Conklin, FAIA, and archaeologist; Mustafa Abadan, AIA, Skidmore, Owings & Merrill; The Reverend Dr. Vienna Cobb Anderson, Associate Rector of St. Paul's Episcopal Church, Richmond, Va.; Dale Lanzone, President of International Public Art Ltd.; and Ori Z. Soltes, Director of the B'nai B'rith Klutznick National Jewish Museum in Washington, D.C.

William Conklin, our first speaker, immediately led us away from the *particular* to the *common ground* that holds all art, architecture and religions together. He lamented the fact that for a long time in America the religious and artistic minds have been on separate tracks, with religionists ill at ease with contemporary art and artists ill at ease in the institution of religion. He felt that none of the buildings we saw evoke *contemporary* religious experience, but rather are forms that say, "My sacred space is clearly not yours," and that their definitions of sacred space are too narrow. This, he conjectured, is because of the separation of the artistic and religious spirit.

He dared to suggest that the spiritual frontier in this explosive world is to be found in the art museum, which 66 percent of American people believe are spiritual places. Why did we not include a visit to an art museum where both the artistic and religious could come together? Certainly their aesthetic standards and construction are higher than for religious buildings of any faith. The new Museum of Contemporary Art in Chicago by German architect Kleihues devoted to 20th century art, prophetically takes the form of a temple. Conklin stated, "I was amazed that without sermons or liturgy, it was an incredibly church-like experience for me, but the religion involved was some kind of higher, universal religion with which none of our separate religions could easily identify."

We must always move from the particular to a more universal ground. *When we particularize we limit truth.*

As a clergywoman and theologian, Vienna Cobb Anderson reminded architects and artists that spaces are not sacred until people are in them, and that they must learn to know the people. It is

what takes place in that sanctuary that defines the people. All of these—artist and architect and people alike—are on a journey, a quest, and like Moses they learn the importance of "beginning." This involves claiming a vision and then training it. All will undergo suffering, but without vision the people will perish with the artist in banality. The planning of sacred space requires risk and trust and is not attained overnight. Remembrance is important in creating the Presence. Remember that God too will be present in that space.

The senior designer of the mosque, Mustafa Abadan, told us that though he did not consider himself religious, his study of Islam has convinced him that the relationship of the person to the space is what is important. Ritual is individual and not communal. However, with this emphasis on the individual, Islam also emphasizes the cosmic and universal. Its art is integral to its architecture; its calligraphy and geometric patterns are built uniquely into the walls. As to the separation of the sexes, this is not a part of the religion itself but a part of its history.

Dale Lanzone began his remarks by telling us that he was appreciative that Public Art was included in our agenda and that it makes him feel more hopeful. Much of his time, he said, is spent trying to persuade the public that art is important at all. The role of the spirit is so complex that it can also be followed in public art. For instance, Modernism and Post-Modernism are voices of celebration and come through with authenticity. Whenever you have a real artist you will have real sacred space. He said he believes that there is a will and commitment today for a more inclusive spirituality that will allow people to recognize it in many places.

The last panelist, Ori Z. Soltes, used the ancient symbol of the hand to prologue the five points he wanted to make. The four fingers are connected to each other as our faiths are connected, and all are connected to the thumb which represents God who is separate but still a part of the hand: (1) Architecture is a visual mediator between the Divine and man; between the microcosm and the macrocosm; (2) Religious buildings (including funerary buildings) provide a meeting place for this encounter; (3) Architects have the role like a priest of calling forth the spirit; (4) The architecture plays a

(Continued on page 23)

CONCERNING THE SPIRITUAL IN ARCHITECTURE

By Thomas Barrie

When one studies the history of the world's religions and mythological traditions, it is difficult not to be astounded and at times overwhelmed by the sheer number and diversity of the examples. Humans, it is clear, possess an inexhaustible need for religious expression, and symbolism and ritual have always been connected to architecture. However, the study of religion and mythology is not typically a part of an architect's training. The rigorous education and apprenticeship required emphasizes design, technology and construction, and the only courses that come close to the study of culture and religious beliefs are those on the history of architecture and theories concerning it.

My own training as an architect followed this model. However, because I attended a self-described "experimental school" at the graduate level there were few required courses. Also one professor whose approach was fundamentally spiritual gave me a deeper appreciation of the essence and meaning of architecture. It wasn't until I graduated, however, and was confronted with the superficiality of much of the work I saw that I began to search for answers. At first I read religious texts for purely personal reasons, but gradually the apprehension of our basic human need to orient ourselves spiritually in the world and its relationship to architectural form, became apparent to me.

Later I found others who were con-

cerned with these issues. I also found that the many sacred sites I visited were instructive, not only architecturally but spiritually. As an architecture professor now, I find that my students are naturally receptive to exploring the spiritual in

I am suggesting that these voices of the spirit need to be rediscovered if we are to produce architecture that will minister to the basic human need for emotional security and social interaction.

architecture. The design process itself is one of discovery and expression; thus, we embark together on a journey that is both academic and spiritual, and that will necessarily involve twists, detours and struggles.

Broadening architectural education is difficult; however, in part because contemporary Western culture has cut itself off from its roots; it has lost its memory.

Mircea Eliade consistently refers to the "desacralization" of the modern world and to the amputation of the past as the "Second Fall." After the First Fall, humans were separated from God and were conscious of the separation, but today unlike our ancestors we are not even conscious of the separation.

Human beings are above all social animals, and nothing will obviate the need for a sense of place and community. We need architecture so that we can gather for communal and religious purposes. It is our responsibility as architects and educators to address this need and to help our students and clients see the importance of synthesizing the past with the present. Such an approach will consider the general and the specific, the universal and the particular, the timeless and the contemporary.

I do not want to minimize the complexity of this challenge. We have only to look around and see examples of buildings that demonstrate a misunderstanding of fundamentals. Equally myopic is the search for a universal order that will provide only easy answers to complex phenomena.

The architectural act is one of discovery as well as creation. Certain questions have been asked since the beginning of time and have remained unanswered except through the voices of myth and world religions. I am suggesting that these voices of the spirit need to be rediscovered if we are to produce architecture that will minister to the basic human need for emotional security and social interaction. I believe such a discovery will establish a new relationship between form and meaning and will also provide the framework for new legible environments. □

THOMAS BARRIE is Assistant Professor of Architecture at Lawrence Technological University in Southfield, Michigan. His book, *The Place and Path in Sacred Architecture*, is published by Shambhala Publications in Boston.

SERVING ALL FAITHS

By James E. Burlage

I was a part-time parishioner of St. Aloysius/Mary Catholic Church in Gualala, Calif., and was asked to help with plans to accommodate the growing congregation as the Point became more populated and Sea Ranch was developed. David Arkin, also a parishioner and architect, was asked to assist.

With our guidance and suggestions, a space similar to the traditional cloister with outbuildings provided for social and community needs, with the church proper remaining as a sacred space. Perhaps the unique style might be called Modern Gothic: "As in the Middle Ages, this new church evolved from the desire of a group of people to have their own structure for worship and a place which might serve other faiths. The articulated columns, the diagonal bracing to the beams and the sweeping visual movement to the altar are a Gothic reference, as is the cloister surrounded with sloping roofs."

Set on the crest of a wooded terrace above the Pacific Ocean and Highway One, the design intends to appreciate the sanctity of the natural beauty of the site, rather than compete with it. The primary orientation is due south to the beach and rocks of Gualala Point Regional Park, providing the backdrop for the altar. This axis continues back through the lobby to an entry porch featuring a large symbolic baptismal rock (which catches rainwater collected on the standing seam copper roof), across the church yard and under an arbor. The rear walls of the church open completely via bifold veneer doors for overflow into the outdoors. The church is appended by a cloister, formed by a roofed

Mary Star of the Sea, Gualala, Calif.

bench and an "outbuilding" housing restrooms, a kitchenette and storage, which help protect the cloister from the near constant ocean winds and form a pleasant, usable outdoor space.

In an area which has been heavily logged, particular attention was paid to the use of wood. Every attempt was made to use small dimensioned lumber and expose the structure so that the wood could be fully appreciated.

Custom vertical grain Douglas fir windows along the southeast and southwest sides allow the sun's rays to store heat in the concrete floor. High efficiency radiant floor heating keeps worshipers warm through cloudy periods. The lighting of the church is primarily indirect via halogen sconces. Pendant fixtures add sparkle while hidden bulbs wash the walls between the studs. The "landscaping" around the church is best described as a Redwood Forest Restoration. Over 200

seedlings have been started by members of the parish. Only the cloister, yard and grass-crete parking areas are maintained as "lawn."

The project is testimony to a process of collaboration—between architects, structural engineer, a craftsman of a construction supervisor, and a dedicated team of skilled and volunteer carpenters.

Members of all faiths participated, giving freely of their time to clear trees, set reinforcing, cut and erect wood structure and finishes, plant trees, build walks, paint windows and doors, organize other volunteers, attend approving agency's planning meetings, build cabinetry, locate sculptures and artisans, fund raise and provide support to a dedicated and talented contractor so that a modern Gothic church could become a reality.

Mary Star of the Sea won an Award of Honor for Design Excellence from the San Francisco AIA Chapter. □

JAMES E. BURLAGE, FAIA, RIBA, is a principal architect with over 30 years' experience in the design of churches and educational facilities. He formerly was principal-in-charge of The Architects Collaborative office in San Francisco.

A CAMPUS BEACON

By Carol A. Lettieri

It is estimated that 20 percent of the student population at the Massachusetts Institute of Technology (MIT) participates in the religious programming of the various faiths. The buildings used for this programming have been scattered across the campus. MIT officials decided that it was expedient to consolidate these activities under one roof and suggested the renovation of a building that had housed the Center for Advanced Visual Studies for decades. It was an industrial-grade building, and chaplains complained that it had all the charm of a welding shop. But after a two million dollar renovation, it has been received with enthusiasm as the new Religious Activities Center

It now serves as a spiritual home for 13 distinct religious groups with widely diverse worship, food preparation and social practices. Opportunities are given to share or make multiple use of spaces Robert Randolph, Associate Dean, remarks that when groups were located here and there they could avoid recognizing differing points of view and never be challenged to accommodate differences. One of the intentions of this consolidation was to create an atmosphere where there was bound to be some rubbing, some friction, some conversation and ultimately some education of the other's beliefs

ONDRAS Associates of Cambridge with Martha E. Ondras as principal were chosen as architects and met with campus chaplains and students in brainstorming sessions to shape a program of use that would satisfy the divergent

Muslim prayer room. A soaring ceiling with an inscribed circle reference domes and geometric elements common to Islamic architecture.

Basement. Light from the first floor skylight pours down the light well to the windowless basement. Farmhouse-style windows let the indirect light from the open area under the light well spill into the perimeter offices.

needs. These included spaces for worship, counseling, study, prayer, cooking and dining, celebration, dancing, chanting and song. The architects reworked the existing floor plan to create a central lobby. The lower floor was opened to the main lobby with a new stair and light well, chaplain/counseling offices and a student living room. The east-facing wall was given special treatment in both the Hillel (Jewish) sanctuary and the Muslim prayer room where worship and prayer are oriented to the east.

Treated with natural wood and warm colors and light filtering shades, the roof monitors were used to create a dramatic sense of space and light tempered to a level appropriate for a contemplative space. To add light and warmth to the windowless basement, one roof monitor was replaced with a skylight and a 10'x10' light well was constructed.

The new Center is almost adjacent to the Saarinen-designed interfaith chapel so that worship services can also be held there. Campus chaplains and students alike seem thrilled with the new facility and report that it has begun to create a synergism among the religiously diverse residents. Hillel and Muslim groups, for example, have started to explore the possibility of sharing a kosher kitchen.

This renovation seems to be a beacon for the future. □

A TREASURE RECLAIMED

By Betty H. Meyer, Editor

Phyllis Lambert, OC CO, OAL, FIRAC,
Director, Canadian Centre for Architecture
Montreal

© Gabory Silagy

The vision of an interfaith center in Cairo was first articulated by President Anwar Sadat of Egypt and now has taken a major step toward becoming a reality with the restoration of the Ben Ezra Synagogue. Situated among medieval churches and an ancient mosque in Old Cairo, it stands at the centuries-old crossroads for Jewish, Christian and Muslim communities. Its restoration returns a major architectural monument and house of worship to the community, as well as provides a facility for the display of artifacts and archival materials.

The restoration is the result of a 15-year project under the direction of architect Phyllis Lambert and an international team of archeologists, architects and historians. The present building constructed in 1892 stands on the foundations of a synagogue dating to at least the eleventh century; thus, the site has been a center of Jewish life and worship for more than a millenium. Its neighbors bounded by ancient Roman walls include a concentration of Coptic churches, the Coptic Museum and the Mosque 'AMR, the first mosque built in Egypt.

The architecture of Ben Ezra Synagogue is a mix of local influences and traditional synagogue design. It has strong affinities with the nearby Coptic churches, including the basilican design with nave and walls divided by columns, the triple sanctuary (an arrangement not commonly found in synagogues), the vaulted roof and decorated carvings. As is the case with many medieval Islamic buildings, the design vocabulary of its builders and craftsmen who were probably themselves Copts is easily recognized.

The building also reflects Islamic influences: carpeted floors for worship, the holy man's tomb in the nave, details of carving in the hekha, Kufi inscriptions on lamps and paneling, and the acroteria. The projecting semicircular apse in the eastern wall hints at a local tradition of medieval Jewish architecture.

Declared a national monument in 1984 the synagogue had been revered for its historical and symbolic importance in the life of the Jewish community. Yet, it had not been an active place of worship since the mid-1960s and its physical state had badly deteriorated. Overgrown trees blocked the roof gutters forcing water to seep through the roof causing interior damage. Eaves were crumbling, wall surfaces marred, and the foundation stone undermined by groundwater.

The government of Egypt and the World Jewish Congress agreed to cooperate on a project to inventory, restore and

create proper storage conditions. The following year the program was expanded to include dialogue between Muslims and Jews. Phyllis Lambert was invited to organize an appropriate conservation project and propose a program for an interfaith center.

Future plans include exhibitions of manuscripts, documents and ritual art in Egypt, Israel, Europe and the United States.

Note: This project has been documented in a fully illustrated book, *Fortifications and the Synagogue; The Fortress of Babylon and the Ben Ezra Synagogue*. The text has been written by an international team of experts in the field.

THE HUMAN FACTOR IN CHURCH DESIGN

By Herman Hassinger, FAIA

Several months ago a project of ours had a very unusual structural solution. We took an existing church and widened it as well as extended it in length. The technique, while cumbersome, worked well; the final result is an almost seamless expansion. Behind the solution was the motivation that drove the process.

The existing structure was a simple basilica nave framed with laminated arches (c 1958). The steeple was a stock aluminum structure poorly proportioned. To increase the size, new double arches were sistered to the original arches. These extended the width and roofline to create an additional 20 feet of breadth. Additionally, the side aisles, formerly inboard of the arches, were moved outside of them. The nave seating was increased from 195 to 450.

In the process 40 feet of increased length maintained the original proportions of the nave with much of this area dedicated to an enlarged chancel. In order to reuse the existing windows in the lowered roof line, dormered bays were constructed to reuse the existing stained glass within the newly widened building. Paneling and woodwork as well as pulpit and furnishings were carefully removed, rehabilitated and replaced in the new design.

It was a conscious choice of the congregation to hold and reuse furniture, art and artifacts that were part of their history. Artistic excellence was never a consideration. These objects had been saturated with sentiment. They were an important factor in the make-up and personality of the parish and they had to be reused.

Most stories about church buildings never mention this important aspect.

HERMAN HASSINGER, FAIA (Herman Hassinger Architects) practices in Moorestown N.J. He has designed over 200 churches in his 40 years of practice.

Grace Lutheran Church, Henderson, N.C., existing building. The patch on the roof is from the prefab steeple lying in the foreground.

The building completed, widened and lengthened. Strong tower and steeple with obvious historic and European references appropriate for an historic Lutheran congregation.

familiar objects that are totally unrelated to their aesthetic qualities or intrinsic worth.

Another recent project reinforced the importance of the human factor. This congregation traced its beginnings to the 18th century. The existing church, a 19th century two-story (nave on top) building was held captive by its graveyard, which allowed no room for expansion or rebuilding. In the 1970s, property was purchased across the street to begin a programmed relocation that would be a single level facility with offices, classrooms, fellowship hall and a new sanctuary. This was accomplished in three stages: 1978, 1986 and 1993 with the sanctuary as the final step.

The design of the new structure was a contemporary layout with arena style seating in the half round. It has a freestanding altar and a modern laminated timber structure.

However, they insisted that we reuse all of their liturgical furnishings: altar, pulpit, font and lectern. The stained glass windows were a real problem. Each was a 19th century individual window approximately 4' wide by 10' high. Six were geometric panels and eight had figures with a lot of deterioration. The solution was to completely rebuild and regroup the windows to fit into the scheme of the new building. This was not glass that you would travel out of your way to see. It was typical 19th century glass that you can find in any country church of that period.

What was important to them were the dedication panels. Families and pastors memorialized in these windows were in the congregation or in the memories of the living. There was no way some "fancy architect from out of town" was going to separate them from the familiar icons of their history.

The final result might never win an architectural design award but it did earn the gratitude of two parishes that they have a link with their history and a means to project their past into the future. □

ICONS AND THE HIDDEN EMPIRE

By D.C. Christopher Gosey

Though little known in the West, icons depicting Christian themes have been reproduced in Ethiopia for a much longer period than in any other center of Christianity in Africa. The achievements of Ethiopians in the creation of illuminated manuscripts, church murals, and icons on wooden panels are equal to those of Egyptian and Nubian Christians

Unfortunately, these achievements have rarely been mentioned in art publications, and representative works are equally rare in collections of European and American museums. This neglect is understandable given the topographical remoteness of Ethiopia. For over 2,000 years, far from the currents of world history (as we know it), these people remained hidden atop their African high plateau. During the Middle Ages the very existence of this hidden empire was a subject of mythology.

In the last 60 years, however, Ethiopia's illuminated manuscripts have increasingly drawn the attention of a few specialists while its murals and the churches that house them have been documented by Dr. Georg Gerster in his book, *Churches in Rocks*. The existence of paintings on wood was virtually unknown until Ethiopia became

open to tourists in the '60s.

Icons kept hidden in churches and monasteries came to light, broadening our knowledge of this remarkable artform. Today, it is estimated that aside from 300 icons housed in the Institute of Ethiopian Studies in Addis Ababa, some 600 more are in the hands of collectors throughout Europe and the U.S. The discovery of these works became an exciting event among Europeans when a landmark exhibition, gathered from this collection, traveled across continental Europe in the early '70s.

D.C. CHRISTOPHER GOSEY, founder of Holy Images and member of IFRAA, continues the ancient tradition of iconography. After five years of interning as an architect, he began his study in the classical tradition of iconography. He studied with Ksenia Pokrovsky whose work is in the collection of the Patriarch of Constantinople, Pope John II and Metropolitan Theodosius of all America and Canada. After embracing Russian Orthodox spirituality in 1988, he was drawn to Ethiopian iconography and his work today expresses this influence. His work can be seen in collections and churches in the U.S., Germany, Africa and New Zealand

Another reason these icons were virtually unknown is found in their liturgical use by the Oriental Orthodox Church in Ethiopia. There are no icon screens with doors that separate the Beta Mekdes (Holy Place) from the nave as in Eastern Orthodox churches. In general practice, icons are not exhibited during the liturgy except on rare occasions. So holy are

these images in the eyes of the faithful that there would be no thought of having them in their homes.

What Distinguishes the Ethiopian Icon?

Though the traditional definition of the word *icon* is "God's word in lines and color," iconographers rarely transposed images directly from the Holy Scriptures. They borrowed from Eastern and Western models while retaining the flavor of Byzantine iconography. As a result, the Ethiopian Church, like the Coptic Church, developed an iconography distinctly its own.

What are its distinguishing features? First, the panels on which they were painted are either diptychs or triptychs while Eastern Orthodox painters primarily used single panels. Traditionally, Ethiopian panels were made from the olive tree or from the Wanza tree and were usually square-edged with intricately carved patterns forming a framelike border. These patterns would also decorate the exterior of the triptych employing crosses, interlaces and diamond shapes. Some iconographers, however, would paint these patterns over gesso rather than carve them

Another difference is the limited palette of the Ethiopian painters. This palette consisted of red cinnabar, yellow orpiment, charcoal, white gypseous chalk, and indigo blue, which was imported from India. These pigments were mixed with an animal protein forming a tempera applied directly to the prepared panel

The primary distinction of Ethiopian icons lies in the canonical rules governing every inch of subject matter. These unwritten rules, firmly established by the 17th century, are still adhered to by artists. □

ACCESSIBILITY TRANSCENDS THE PHYSICAL

By James Oleg Kruhly

I have always believed that there is a reward for a good deed, but often it reaches the doer in an unexpected manner.

The Americans with Disabilities Act was legislated in 1992 for the benefit of millions of disabled Americans. The law, besides establishing fair employment practices, gave not only the government but businesses, institutions, and all other providers of "public accommodation" impetus to make their facilities accessible. The reassessment and self-evaluation resulting from this new set of Federal mandates have led not only to major changes in facilities, but in many cases to a rewarding new definition of accessibility which transcends the physical.

Although the language of the ADA exempts two groups, religious organizations and private clubs, many church groups have taken the lead toward accessibility with vigor and enthusiasm. Regardless of denomination, religious institutions have been reviewing the accessibility of their community mission as well as the adequacy of their ministries to the congregation. The question most often posed is, "Are we accessible to those outside our congregation who are in need?"

In 1992, First and Central Presbyterian Church in the heart of Wilmington, Delaware, began to evaluate its compliance with the ADA guidelines. The initial goal was to make the building completely "accessible" to persons with disabilities, even though churches are legally exempt in Delaware. In some states, the federal law has been amended to include religious groups.

JAMES OLEG KRULY + ASSOCIATES, established in 1977, is an architectural firm with offices in Philadelphia and Paris, specializing in significant renovations, adaptive reuse and additions to existing and historic structures.

First and Central Presbyterian Church, Wilmington, Delaware, entrance to Education Building with new ramp.

Built in 1928, First and Central's neo-Georgian brick building consists of a 6,000 square foot sanctuary and a three-story education wing containing 28,000 square feet. The complex anchors one corner of Rodney Square and sits directly across the street from the DuPont hotel, Wilmington's most noted landmark. Since its construction, the church buildings have not been renovated in any substantial way. Most of the original walls, ceilings, floors and most of the finishes remained, which is unusual for a structure of that age.

Seventy years ago, accessibility was not a pressing issue. Churches were built primarily for the congregants, who took great pride in belonging. Tradition and a sense of stability were highly valued. Both inside and outside, the architecture emphasized tranquility, privacy and compartmentalization. Interior spaces lacked openness and "flow."

At First and Central, the double-loaded corridors of the education wing lacked natural light, resulting in a dark, introverted and unfriendly atmosphere. Solid wood doors with meager six-inch round view ports separated the classrooms and other activity spaces from the circulation spaces. To make matters worse, the complex had a total of six floor levels, impeding access for the disabled and elderly.

After organizing a renovation committee, First and Central Presbyterian defined a scope of work required to make the building accessible and began the search for an architect. My firm had the good fortune to be invited for an interview. During the course of our presentation, I realized that the building committee had a larger goal for which the accessibility issue had been only the spark. The church's real objective was to bring new life to its facility by making it not only physically acces-

sible, but accessible in the greater sense—truly inviting and welcoming to the community at large. With this goal in mind, we recommended that client and architect work together to plan major changes. The building committee was in complete accord.

We began our design by establishing accessible circulation routes to and through the facility. We made a commitment from the outset to locate the proposed elevator in the front of the education building, not in the rear, and to allow each of the six levels in the building to be accessible by elevator. This would require penetrating the classically composed roof scape of the education building, but we were confident we could creatively resolve this problem. Outside, two new ramps gave access to the education wing, the side door to the sanctuary and the entry to the chapel.

On the interior, we insisted on bringing natural light into hallways wherever possible. Where privacy was not required, we replaced the solid corridor walls and doors with glazed openings, multi-paned in the style of the existing Colonial Revival exterior windows. Where visual access was not desired, we used solid doors with etched glass transom units above. The glass walls introduced natural light "borrowed" from the perimeter spaces while inviting glimpses of the activity within.

To further enliven the corridors, we selected warm, light paint colors to contrast with the deeper hues of the room walls. New vaulted corridor ceilings, uplit by custom pendant light fixtures, increased

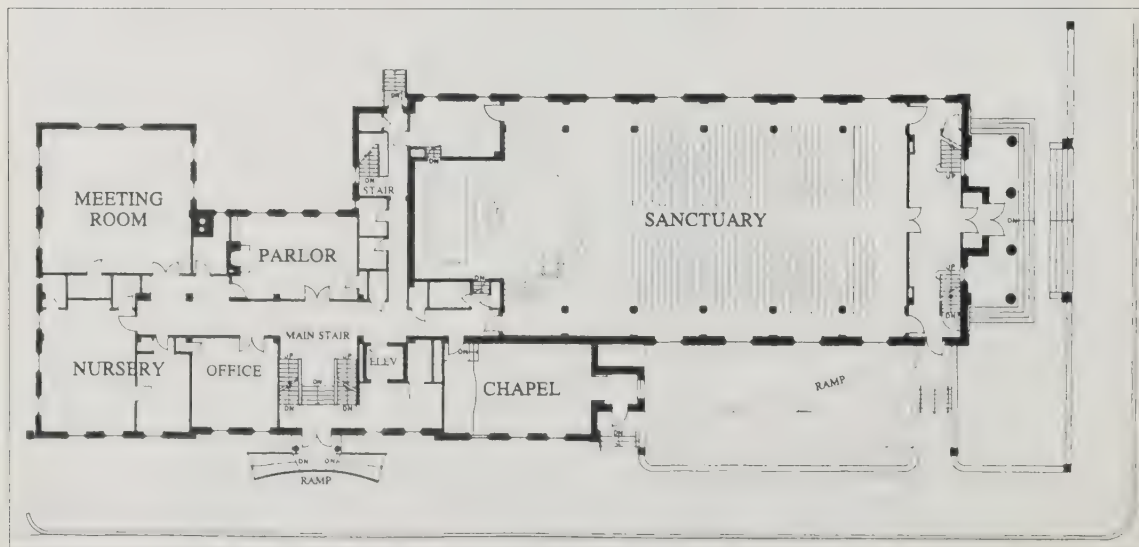

New "urban park" created out of a need to provide barrier-free access to the sanctuary (right) and chapel (straight ahead).

the sense of movement and light.

On the exterior, the new brick entrance ramps were designed and detailed to be sympathetic with the historic building, iron fences and paving. The original route to the sanctuary door led through an enclosed green space, inaccessible to the public. With the help of a talented landscape architect, Margaret S. Judd, we transformed the area into a small urban garden, a virtual extension of Rodney Square and an offering to the city.

The garden is a fine example of how the

initiative to comply with ADA guidelines can evolve beyond the need for a ramp into a multifaceted overhaul reaching beyond the letter of the law and into the spirit of the law, a greater accessibility. This can happen only if architect and client join forces in taking an expansive view of the issues at the heart of the legislation. Accessibility is more than a metal lift at the back door. It is an invitation to people of all abilities, from within and outside of the congregation, to enter and enjoy the facilities with dignity and equality. □

A FUTURE IS SAVED

By Betty H. Meyer, Editor

It was a church that didn't deserve almost two decades of neglect. It was founded in 1839 by a former slave, Trueman Le Pratt, and according to legend was painstakingly constructed over a period of ten years by slaves and freedmen who laid the bricks by torchlight. It was the first black church in Maryland, and the basement had a tunnel reported to have been used to harbor slaves on the underground railroad.

But time moved on and the congregation flourished and moved to the suburbs, this time hiring architect Frank Davis to design an impressive Renaissance Revival church, which still stands today. The original church was slated for demolition but fortunately was saved by local preservationists and listed in the National Register in 1976.

It wasn't until 1991, when the nonprofit Baltimore Urban League was looking for larger and better headquarters, that a proper restoration was envisioned. City and state funds, a grant from the Maryland Historic Trust, and a \$600,000 construction loan from NationsBank Community Development made restoration possible. The African-American community itself raised a half million dollars.

Experts agree that the restoration was done with superlative taste and historical consideration. All materials in the 22,000 sq. ft. complex were restored or replicated. Windows of authenticity, never built commercially, were assembled by a manufacturer. Decorative painting and stencils were restored. The sanctuary is once again graced with a pine wainscot, cherry railings and three rows of balcony pews supported by iron columns. The sanctuary will house a museum of African-American history and culture. The catacomb or underground tunnel was retained as a meditative space. The Urban League will have ample program and administrative spaces as well as a fellowship hall and classrooms.

The entire community has been given a great gift. *(Continued on next page)*

monitor existing programs to maintain the ideals of design excellence, active participation by non-architects, and quality programs that appeal to our diverse membership. Composed of past leadership, theologians, consultants, artists and architects, the Wisdom Council may well become the conscience of IFRAA. They also will have an elected leadership position on the Advisory Group, who represents and advocates their ideas and evaluations.

For those who have felt left out in the past, and for those who simply feel the price of membership is too costly, we have developed a new benefit. Simply write a letter to Jean Barber at the AIA (1735 New York Avenue, NW, Washington, DC 20006) and request to be placed on the IFRAA Supporter Mailing List. This will include you on IFRAA mailings, conference announcements, special reports and the Honor Awards "Call for Entries." While this service is provided at no cost, it is our hope that you will recognize the benefits of membership and consider joining!

Finally, what is the future of *Faith & Form*?

We believe *Faith & Form* is in a strong position to continue providing top quality articles and insights on religious art and architecture. Since the magazine remains independent of the AIA, *Faith & Form* can keep a clear and focused eye on IFRAA. Once every year, an issue will be dedicated to the award-winning entries in the religious art and architecture Honor Awards. Complimentary issues of *Faith & Form* will be provided as an added benefit to *Allied* members, at the expense of IFRAA. Unfortunately, there are not funds to subsidize free subscriptions to all architect members, but the cost of a subscription remains \$26.00 per year. For subscription information, tear out the reply card in the center of the magazine. Supporting the magazine ensures the survival of this vital communication link that crosses all our professions! ☐

INTERFAITH EXPLORATION

(Continued from page 8)

part in the transformation that takes place and with its continuity; (5) The Western move to secularism has turned away from the idea of Divinity or its institution, but the search for the spiritual is alive

His closing remarks addressed William Conklin's reference to the museum as a spiritual place. Divisions between the faiths are blurred now, he said. They find that they are all using symbols that are essentially universal. The symbol of the cross, the crescent, and the star of David are still used though their origins go back beyond the particular faiths to primitive cultures

The word *museum* comes from *museo*, which means temple of the muses, or a recognition of divinity. He believes the museum is a valid sacred space if it functions spiritually. Think of the Rothko Chapel in Houston, or Barnett Newman who did the Stations of the Cross and then Judaized them by abstraction and gave them a universal voice, or Keifer who went to church, perhaps not to pray but to meditate on spirituality which then informed his work.

The discussion after the panel was lively with many agreeing and many disagreeing. Questions were asked and comments made about their own experiences working with the language of symbols

For new members who have never attended an IFRAA conference, I should tell you that the awards banquet on the last night is always a fun and festive occasion. We all dress up and are ready to applaud the award winners for excellence in the visual arts and architecture. Robert Rambusch was our master of ceremonies and his intelligent wit led us through a slide show of the winning projects and introduction of the winners

The climax of the evening was the announcement of the prestigious Frey and Conover Awards bestowed upon two special individuals. As chair of this committee, Crosby Willet introduced this year's winners: Edward Larrabee Barnes was the recipient of the Frey Award as an architect who has contributed immensely to the field of religious architecture, and John Dillenger received the Conover Award as a theologian who continues to make us aware of the relationship of the arts and religion

And so this exploration into the interfaith sacred arts and architecture came to an end, but I suspect that there will be many times in the coming year when an artist or an architect will pause and recall some of the comments made at this conference. There is always another year and another conference. We hope to see you there. ☐

THE SYNAGOGUE. H.A. Meek. Phaidon Press Ltd., London. Available from the AIA bookstore, 1735 New York Ave., NW, Washington, DC 20006, (800) 365-2724. 230 pp.

Throughout the long and often tortuous history of the Jews, the synagogue has been a constant presence and a source of spiritual strength. Playing a symbolic as well as practical role, it has acted as a force for the faith of countless Jewish communities all over the world."

So begins the rich narrative by H.A. Meek, who leads the reader on a long and turbulent journey from the tent tabernacles of antiquity to the synagogues of today. From the ruins of Solomon's temple and subsequent efforts to rebuild it in the sixth and first centuries (B.C.E.), it is not an untimely reminder to know how much the reconstruction of the temple at this site plays in the arena of international politics and at the interstices of three of the world's dominant religious faiths. One need only read the international news of bombings in Israel and Jerusalem to know that this is the flashpoint of an unresolved and 2,000-year-old quest.

Presented in a casual, almost conversational manner, Meek introduces his story on a Sabbath morning, and leads the reader through a typical worship service in his local synagogue outside of London. With the care of a friend explaining an unfamiliar ritual, he describes the service and conscientiously details the purpose of the physical elements such as the bimah, the ark, the torahs, and the eternal light. He notes the segregated seating galleries and explains the history of this male-dominated tradition.

From the intimacy of this introduction, Meek moves to the real thrust of his enterprise, exploring the architectural evolution of the synagogue. Focusing on these same physical elements of ritual, he traces historical texts, drawings and sketches to illustrate their evolving design and changing relationships. Through both the Ashkenazim and Sephardim traditions to the more contemporary Reform and Orthodox synagogues built in the last two centuries,

there is a rich heritage of design forms, plan configurations and architectural styles.

Meek reminds the reader that while many of the traditions mirror the architectural heritage of the particular locale, the peculiarity and generally estranged relationship of Jews to their host nation frequently led to discretion in synagogue design. This is particularly true of the exterior facades, which were consciously intended to blend in, to be unobtrusive and non-threatening to the dominant religious and political leadership. However, the interiors were often far more elaborate and designed for the benefit of the members without fear of offense to the ruling class.

The value of this book goes beyond strictly stylistic concerns, as the author provides written documentation of significant houses for worship that otherwise would exist only as oral tradition. Whether discussing the divinely proscribed and biblically documented tabernacle of Moses, or the nineteenth century East European wooden synagogues torched by the Germans less than 60 years ago, all that remains are the traditions that keep these memories alive. Meek broadens our knowledge of these with descriptive narratives, architectural plans, artists' renderings and found photographs that preserve and enhance our understanding.

Since the book is constructed chronologically, the final chapter documents modernist interpretations of synagogue design. As some of the most prominent pioneers of the modern movement were German-born architects (Behrens, Gropius, Mies van der Rohe), it is ironic and telling that synagogues they designed remain in relative obscurity. For example, a Peter Behrens designed synagogue in Zilna, Slovakia, was erected in 1928, damaged during the war, restored and minus its Star of David now serves as an assembly hall for a university building. While other Behrens designs are championed as forerunners of the modern movement, this synagogue is seldom noted or attributed to his body of works.

One of the more interesting new synagogues is The Gates of the Grove, designed by Norman Jaffe and built in Easthampton, Long Island in 1987 (see

Faith & Form, Winter 1989-90). Meek cites this as an example of a contemporary house of worship evocative of the lost wooden synagogues of Poland. He segues this into a closing query, "Is there a specifically Jewish architecture?" Meek responds,

"Not really. Even the builders of the great wood synagogues of Poland were, in effect, just pushing the techniques of Polish church architecture a little bit further, unencumbered as they were by the rulings of the Council of Trent. In the hand of Israel itself, no consistent tendency is discernible." (p. 227)

What distinguishes this book from a simple cataloguing of buildings and architectural styles is the author's ability to get inside the mentality of the congregations that built them. He shares this insight in a fashion that allows the reader to experience the building, moving through the photographs as if on a walking tour, even though the building may have been destroyed or abandoned in one of the many pogroms Jews have endured. Whether building wooden structures consciously self-effacing in design, or creating grand displays, these buildings became the embodiment of the people and the faith that built them.

Meek does an admirable job not only in documenting the architectural high points of several thousand years of synagogue construction, but also in educating us on the significance of this unique building as house of worship and cultural center for the Jewish people. His informal style brings the substance of his work to a tangible, experiential dimension that few architectural writers achieve. Nevertheless, his book ends without an ending; it just trails off like an unfinished chapter. Perhaps this was his intent, that the real story, i.e., the reconstruction of the temple in Jerusalem, is yet to be told.

—Douglas R. Hoffman, AIA, IFRAA President

THE SYNAGOGUES AND CHURCHES OF ANCIENT PALESTINE. Leslie J. Hoppe, OFM. The Liturgical Press, P.O. Box 7500, Collegeville, MN 56321. (800) 858-5450. Paper \$11.95.

The thesis of this book is that both Christians and Jews look to the literary legacy of their traditions for information about the way their ancestors believed and lived, but deprive themselves of information from an enormous quantity of non-literary sources. Today, archeology is not just concerned with unearthing and describing artifacts and architecture but with helping us understand something of the daily life, religion, economy and politics of a culture. Hundreds of ancient synagogues and churches have been excavated and specific sites have been chosen in the book to help the reader understand early Judaism and Christianity and to illustrate the problems of interpretation.

There were three principal types of synagogue architecture:

Basilica—two rows of columns divided the interior into a nave and two aisles. One had to turn to face the ark that directed worship toward Jerusalem.

Apse—an apse added to eliminate awkward turn.

Broadhouse—Bema placed on one of the broad walls.

There are interesting chapters on synagogues in Galilee, Capernaum, and four that relate to the zodiac and astrology. Christians will be interested that it is probable that Jesus preached in the Capernaum synagogue and that it is mentioned in the Gospel 16 times. Josephus took refuge in Capernaum after being wounded. It was destroyed in the seventh century but is still being reconstructed and is considered by many to be the most beautiful of all the ancient synagogues.

After Jesus' death, Christians continued to meet in the Temple and local synagogues but finally those who believed in Jesus as the Messiah felt the need to be separate. They met in homes, city squares, caves, markets and rented rooms, but as a distinct liturgy developed they needed to meet regularly. Because they did not want attention they preferred house churches with a meal as the core of liturgy. Gradually, churches began to be built in memory of a particular person, or at the site where something had happened. The basilica form was simple and convenient and later a transept was added to give it cruciform shape. The emphasis, however, was always on the interior. The book has chapters that cover almost all of the identified churches.

It concludes that there was no such

thing as a typical church or synagogue. Both traditions have been willing and able to take an "alien" architectural form and adapt it for their own use. It is impossible to describe the intellectual and emotional appeal of this book. I cannot imagine that any Jew or Christian who has a religious or architectural interest would not find it as fascinating as I did.—*Betty H. Meyer*

Specialized Books of Interest

The Art and Architecture of Islam. Sheila S. Blair and Jonathan M. Bloom. Yale University Press, P.O. Box 209040, New Haven, CT 06520-9040. 348 pp. \$65.

Architecture of the Contemporary Mosque. Ismail Serageldin and James Steel. Academy Editions. 176 pp. + 100 illus. Hardback. \$69

Craft and Architecture. Princeton Architectural Press. 37 E. 7th St., New York, NY 10003. Paper. \$24.95.

This is a collection of essays addressing the relationship of craft and the art of building. Its stated purpose is to establish a critical approach to the making of architecture and so conceive craft as a vital source for design. It investigates contemporary possibilities as well as historical examples.

Sacred Space. Photographs from the Mississippi Delta. University of Mississippi Press, 3825 Ridgewood Road, Jackson, MS, (601) 982-6205. Cloth \$35. Paper \$19.95

This book is filled with powerful images of the sacred landscapes that are the nucleus of black life on the Delta. It examines the symbolic meanings of sacred space and discusses the historical and cultural importance of the African American Church.

Conservation of Stained Glass in America, A Manual for Studios and Care-takers. Julie L. Sloan. Art in Architecture Press, Inc., Tonetta Lake Road, Brewster, NY 10509, (914) 278-2187. Paper \$24.95 + shipping.

This complete manual by the director of projects for Harvard University's Memorial Hall, Boston's Trinity Church and Wright's Robie House in Chicago should be in the possession of any owners of stained glass.

The English Parish Church. Russell Chamberlin. Photos: Simon McBride. Trafalgar Square Publishing, North Pomfret, VT 05053, (802) 457-1911. \$39.95.

It is interesting to trace the history of England's parish churches through the years from pagan sites and years of change to today's decline. Each chapter looks at a different aspect of their life and development: people who built them, communities that used them and the village parsons. Attention Anglo-ophiles!

Symbol and Magic in Egyptian Art. Richard H. Wilkinson. Thomas and Hudson, Inc., 500 Fifth Avenue, New York, NY 10110. \$24.95.

Egyptian temples, pyramids and visual arts only have meaning as one understands the fundamental symbolic code that was used for thousands of years. This is the first thematic treatment that covers the symbols of shape, size, color and number, location, hieroglyphics, body language, etc. It should be helpful to all those interested in symbolism and meaning.

Encyclopedia of Architecture. Doreen Yarwood. Trafalgar Square Distributors, North Pomfret, VT 05053.

This book is the result of 30 years of research and on-the-spot study of architectural history. Published in Britain, its stress is there but a number of entries are written from an international viewpoint with reference to American and European architecture. Extensive index and bibliography. 448 pp., 800 drawings, 230 photos.

Encyclopedia of Medieval Church Art. Edward G. Tasker. Trafalgar Square Distributors, North Pomfret, VT 05053, (802) 457-1911. 800 photos. Hardcover \$75.

This should be an essential reference book for students of medieval history. It provides a comprehensive and unique guide to its imagery. The author shows how the artists drew the imagery not only from the Scriptures and Apocrypha but from the contemporary works as well. Its focus is medieval England.

Old Order Amish: Their Enduring Way of Life. Donald B. Kraybill. The Johns Hopkins University Press, Hampden Station, Baltimore, MD 21211. \$35.95. □

Stained Glass brought to life at Westminster Abbey

*L*ondon based Goddard & Gibbs Studios have enjoyed a reputation since 1868 for creating and restoring fine examples of stained and decorative glass. The team of specialist craftspeople welcome commissions of any size or complexity.

*T*he studios are called upon to create windows to suit a variety of ecclesiastical settings. Designs range from those in the traditional style featuring fine painting of faces, hands and drapery, to more contemporary schemes which effectively use the interplay of colour and light.

*T*he facilities of the world renowned Goddard & Gibbs studios are now available to American clients.

For initial enquiries please contact:

Screenflex® Sunday School Partitions

simply the world's most versatile portable partitions!

Imagine . . . being able to easily partition any room in your church to provide the Sunday School classrooms you need. Partitions totally free of any exterior connections. No complicated or limiting track systems, no costly structural supports, no interference with your building's heat, light, and ventilation systems. Screenflex Portable Sunday School Partitions . . .

the partitions of the future are here!

As these churches have done, you too can convert your Gym, Fellowship Hall, Basement, Multi-Purpose Room, or any space in your church into useful Sunday School classrooms in minutes.

REAL LIFE . . . REAL SOLUTIONS!

Churches in all fifty states use Screenflex Partitions to help them better manage their budgets and facilities. Whether you need to partition one classroom, two classrooms, or your entire gymnasium . . .

Screenflex is the solution!

Create *instant* Sunday School classrooms as easy as . . .

Locate partition

Unlock partition and pull handle

Position partition as desired

Screenflex Portable Partitions are available in four distinct lines to meet your distinct needs!

IN THE CROSS OF
THE MILLENNIUM,
FREDERICK HART
ILLUMINATES OUR
HOPES, EVOKES
OUR DREAMS, AND
GIVES LIGHT TO
THE DARKNESS.

THE CROSS OF THE MILLENNIUM

FREDERICK HART

In a vision of light, this historic masterwork celebrates the birth, death and resurrection of Christ. And now, for a limited time, it is possible and affordable to incorporate this spiritually significant work into your worship space.

The Cross of the Millennium is dedicated to the 2,000 year anniversary of Christ's birth. It was created by master American sculptor Frederick Hart, whose achievements include the *ProceSSIONal Cross* for Pope John Paul II's historic 1979 visit to the United States, *The Creation Sculptures* at The Washington National Cathedral, and the *Three Soldiers* at the Vietnam Veterans Memorial.

To learn how your church or organization can own this inspirational work through our unique self-funding offer, please call Madeline Kisting at 1-800-999-4119.

THE PEW BUYER'S HANDBOOK

*What to Look for in
Selecting Pews.*

You're considering a major investment
-in time and resources.

To help you, Sauder Manufacturing - the
nation's leading manufacturer of church
furniture - has assembled and published
"The Pew Buyer's Handbook."

It's objective. It's informative.
And, it's educational. A must-have,
decision-making support for church
buying committees.

"The Pew Buyer's Handbook" offers an
in-depth look at the pew selection process:

- Why And How to Buy
- What To Look For In...
 - Materials
 - Construction
 - Installation
 - Sales Presentation Samples
- Insightful tips on...
 - The critical challenges pew builders face
 - How to judge pew suppliers
 - The DesignLink™ Fabric Coordinating System

"The Pew Buyer's Handbook." It's a complete
guide for merging emotion and fact, making
your job easier and more meaningful.

SAUDER™

Sharing your vision.

Notes & Comments

In Memoriam

Those of us who knew and worked with **Rolland Sheafor**, a former IFRAA president, had great affection and admiration for him. It saddens us to learn that he died at his home in Pinehurst, N.C., on December 21, 1996. Rolland completed 35 years of service and leadership for the Disciples of Christ, serving at one time as full-time chief executive of its Board of Extension. We extend our sincerest sympathy to his wife Laura Frances, son Scribner, daughter Margaret and three grandchildren.

The Boston Architectural Center has informed us of the death of **Arcangelo Cascieri** who served as its dean for 51 years. He was also a renowned architectural sculptor and his pieces adorn churches, schools and public spaces across the U.S., as well as abroad. He will be sorely missed by all his friends.

Those who served on the *Faith & Form* Editorial Committee with **Bert L. Bassuk**, FAIA, knew that he was an esteemed designer of synagogues and a professor at Cooper Union, Pratt and Columbia, but I think we knew him best as a caring individual who had been committed all his life to sensitive social issues. His life was one of contemplation through his large collection of books but which translated into specific action anywhere in the world. He died on March 2 of a massive stroke. Robert Rambusch and Myron Schoen represented us at the memorial service and spoke of his interfaith interest. He will be sorely missed.

IFRAA Members Speak

Eugene Potente, former IFRAA president, and his son E.J. Potente recently addressed the subject of "New Wine Vessels Help in Programming a Renovation" in *Cutting Edge*, the quarterly newsletter of the Disciples of Christ. Richard Kalb also wrote an article on the importance of the narthex, "It's a Big Room: Space Makes a Difference."

Eugene Potente

Revival of Iconography

Chicago is the site of a unique exhibition, "Russia: Sacred Art, Sacred Tradition," featuring 75 works by artists devoted to the post-Soviet revival of iconography. Skillfully crafted objects include icons, tapestries and bronze and silver objects from the former USSR and Poland. American iconographers are being featured in an exhibit at the Brush Art Gallery in Lowell, Mass.

More Than Physical Access

With a better economy, more and more congregations are remodeling or planning additions, so that physical access for the disabled is better though far from perfect. "But physical access is only the first step," says Ginny Thornburgh, director of the National Organization on Disability. It was once argued that people receiving sacraments or being invited to participate in a service had to demonstrate an intellectual grasp of religious belief. Last year U.S. Catholic guidelines stated: "Persons who because of developmental or mental disabilities may never attain the use of reason are to be encouraged, either directly or indirectly, to receive the sacrament of confirmation." Similarly, Sara Rubinow, director of the Dept. of Jewish Education, says that denial of Bar or Bat Mitzvah to people with mental disabilities has all but ended.

A Vision Unfolding

In 1994 Christian Theological Seminary in Indianapolis created the Frederick Kirshner Chair in Religion and the Arts and has appointed Frank Burch Brown as its first professor. The faculty and administrators are working together to determine its shape and content. Prof. Burch says that his goals include "to understand the role of the arts in

NEW HOLLAND
Custom Woodwork Ltd.
Church Furniture

**If you can imagine it,
we can build it!**

Guide to Designing and Buying Church Furniture

New Holland Custom Woodwork has just written an all-new "Guide to Designing and Buying Church Furniture." This booklet is packed full of valuable information and it's yours free for the asking.

Since 1919, New Holland Custom Woodwork has supplied churches nationwide with both "custom" and standard church furniture.

Today, we are America's only manufacturer of "True Radius Pews." As a **Certified Member of the Architectural Woodwork Institute (AWI)**, you can always be assured of our consistent high quality standards.

To order the new "Guide to Designing and Buying Church Furniture" as well as our **Design and Specification Package**, call, write or e-mail us at:

Notes & Comments (Continued from previous page)

Congratulations

A child's drawing of a garden scene. The drawing features several stylized trees with rounded canopies and simple trunks. Some trees have small dots or leaves on their canopies. There are several flowers, some with multiple petals and some with a single petal. The background is filled with handwritten text in a cursive script. The text includes phrases like "in the center of the garden", "orange and apple trees", "beach", "us", "out", "sunny", "the garden", "the trees", "the flowers", "the grass", "the sky", "the sun", "the moon", "the stars", "the planets", "the galaxies", "the universe", "the earth", "the oceans", "the continents", "the mountains", "the rivers", "the lakes", "the forests", "the deserts", "the tundra", "the savanna", "the jungle", "the rainforest", "the coral reefs", "the glaciers", "the icebergs", "the volcanoes", "the earthquakes", "the hurricanes", "the tsunamis", "the comets", "the meteors", "the asteroids", "the planets", "the stars", "the galaxies", "the universe". The drawing is done in black ink on a white background.

To Francois de Menil for the completion of the chapel he designed for the 13th-century frescoes, acquired by Dominique de Menil, and for the museum that will house the frescoes. (The cover of the spring 1995 *Faith & Form* showed us the interior.)

6/JOURNAL ON RELIGION, ART & ARCHITECTURE/NUMBER 1, 1997

To Fred L. Bernheim and Lawrence I. Kahn, who are celebrating 40 years in architecture for the Jewish community in the Chicago metropolitan area. Among their many projects was a cultural learning center and administrative wing for the Percival Goodman-designed North Suburban Synagogue in Highland Park, Ill.

To The Very Rev. James Park Morton who is retiring after 25 years as dean of the Cathedral of St. John the Divine. He will be succeeded by the Rev. Harry Pritchett.

To historic Trinity Church in Detroit, which has sponsored an ecclesiastical art exhibit for the last nine years. It now has become a national event and attracts 300 artists from across the U.S. with juries of national reputations.

Kunst im Judentum

The theme of the latest issue of *Kunst und Kirche*, Germany's religious architectural journal, is Art in Jewish Culture. From the editorial page: "An awareness has arisen that various faiths must reach a level of live-and-let-live, a mutual respect, dialogue and cooperation. There can be no peace on earth without a peaceful and sympathetic coexistence among the faiths." The issue contains articles on contemporary synagogues and art with an acknowledgment of the importance of Jewish culture.

Revitalizing Architectural Education

A report of the Carnegie Foundation writes of the architectural community's long history of failure to connect itself firmly to the larger concerns confronting families, businesses, schools, communities and society. Even on college campuses, "the potential of design education to enrich learning and life has been inadequately explored." Essentially the report calls upon architects and architectural schools to take a significantly larger role in civic and campus life and make better known architecture's potential to help address the nation's most urgent economic, social and environmental concerns. For more specific information, call Robert Hochstein, 202-387-7200.

An Invitation

In response to "An Open Door Policy" (Sir Andrew Lloyd Webber), Notes & Comments, Fall 1996 *Faith & Form*, Brigadier A.B.D. Gurdon of The Open Churches Trust in London, wrote, "It occurred to me that many of your readers will from time to time pay a visit to this country, and it would be a pleasure to provide the necessary information to enable them to see some of the finest and historically interesting churches ever built."

Contact: Brigadier A.B.D. Gurdon, Secretariat, The Open Churches Trust, c/o The Really Useful Group Ltd., 22 Tower St., London WC2H 9NS, U.K. Telephone: 0171-240 0880; fax: 0171-240 1204.

A Rise from the Ashes

In Dresden, Germany, *Die Frauenkirche* (Church of Our Lady) was destroyed during Allied Forces bombing raids in World War II and has remained a pile of rubble in the city's center. This centuries-old cathedral, however, is now in preparation for a complete and real restoration in the next few years. Completed in 1743 it served as the most significant structure of German

Top, downtown Dresden as it appeared before World War II. The Frauenkirche was the most prominent building in the town's square. Bottom, after the 1945 Allied bombing attack, the Frauenkirche was left to lay in ruins in the center of town for decades to come.

Protestantism and its walls echoed performances of Bach and Wagner. CATIA software is expediting plans under IBM's direction. By 2003, it is hoped that it will open as a cultural center for people of all religions for concerts and community events.

Designed with IBM's computer aided design software, CATIA, this computer image shows how the cathedral will look once it's restored.

The Essence of Art

Those who are involved with stained glass will appreciate an article in the spring 1997 issue of *Stained Glass* entitled "Rose Windows: Beyond Art to Mysticism" by artist Andra K. Hartz.

Notes & Comments

(Continued from page 7)

Have you ever thought of a rose window as a mandala rather than as a mere illustration of events and characters of faith? C.G. Jung believed that focused concentration on a rose window and its archetypal symbols can be a catalyst for release and a movement toward inner harmony.

Theology and Design Theory

This was the subject of the March 14-15 IFRAA Conference held in Independence, Missouri, at the World Headquarters of the Reorganized Church of Jesus Christ of Latter Day Saints. The firm of Hellmuth, Obata and Kassabaum, Inc. of St. Louis was given the challenge of designing a building that would express the theology and embody the ministry of this particular faith.

Temple of the Reorganized Church of Jesus Christ of Latter Day Saints

The discussion and program centered around the striking design of a chambered nautilus. The interior is featured on the cover. A full report on the conference will appear in the next issue of *Faith & Form*.

The Orthodox Church Celebrates

UNESCO, the University of Alaska and the Alaska State Museum are planning an exhibition as part of a bicentennial celebration of the life of Saint Innocent Veniamonov. The Bishop's House, which he designed, was used as a diocesan headquarters and seminary and will house the exhibit. Part of the exhibit will be devoted to St. Innocent's representation in modern iconography and to the secular art works inspired by his life.

Liturgical News

The latest issue of *Reformed Liturgy and Music* welcomes Harold Daniels back as editor and Paul Detterman as the new Associate for Worship. It also announced a forthcoming Spanish hymnal that will be introduced at their General Assembly. The volume contains 475 musical entries with psalms, hymns, songs and service music, as well as 100 pages of orders of services, prayers and other worship aids. For further information: Glauca Vas Concelos Wilkey, 502-569-5332.

THE 1997 AIA RELIGIOUS ART AND ARCHITECTURE AWARDS

The 1997 AIA Religious Art and Architecture Award jury: From left, Walter F. Chatham, AIA, (chair); Phillip T. Markwood, FAIA; Kenneth von Roenn Jr., Bishop "Pat" Spillman, and Errol Barron, FAIA.

The AIA Religious Art and Architecture Awards program was founded by the Interfaith Forum on Religion, Art and Architecture (IFRAA). In 1994, IFRAA merged with the AIA to create the IFRAA Professional Interest Area (PIA) to pursue the highest standards in art and architecture for sacred, worship and liturgical teaching spaces. Both the architectural design and visual arts awards programs have been incorporated in the AIA Religious Art and Architecture Awards of Excellence.

The Religious Art Awards are open to all artists and craftspeople, and give recognition to

excellence in design and execution of art works in all media that contribute to the religious experience. Entries are judged on originality of design and concept, and appropriateness for sacred spaces.

The Religious Architecture Awards are open to established as well as new practitioners and designers from small and large firms. Both new construction and renovations/restorations anywhere in the world are eligible.

For information on the 1998 awards program, contact the AIA at 1735 New York Avenue, NW, Washington, DC 20006. □

Project

Cathedral of the Madeleine
Salt Lake City, Utah

Emerson, Munro & Company, Toronto, *Liturgical Consultant*

A landmark of both local and national significance, the Cathedral was named to the National Register of Historic Places in 1971. The interior that survives today is the only example in the western United States of the ornate, eclectic Gothic Revival style. However, after nearly a century, much of the decorative interior was in danger of rapid deterioration.

The current restoration began with an initial investigation of the structure. Wood carvings, marble, decorative paint and murals, and stained glass were analyzed individually. Historical documentation and surveys were conducted, enabling the Cathedral to be restored to its original condition.

Environmental and engineering-related improvements were integral to the restoration. A state-of-the-art climate control system was discreetly installed behind the paneled walls. A new lighting system was installed, including decorative solid brass fixtures reminiscent of the originals. Acoustical improvements were designed to increase resonance and sound in the space, and a new comprehensive mechanical and electrical distribution system was installed. The creation of barrier-free environs allows unlimited access. Seismic retro-

fitting of the towers and the entire roof structure stabilized the existing unreinforced masonry walls.

Initiated by the Second Vatican Council, required liturgical changes were implemented. They included a new, centered onyx and marble altar; modifications to the sanctuary; congregational seating on three sides of the altar platform in the nave and transepts; and a new baptismal font. A small Eucharistic chapel was created behind the new carved bishop's screen.

A new pipe organ includes hand-carved oak casings and pipes of polished tin with embossed and gilt features. An investigative study of the elaborate interior painted decoration involved exhaustive paint sampling, chemical and microscopic analysis, solvency testing, photo documentation, as well as the tracing, color matching and recording of every decorative motif within the Cathedral's interior.

Jury: Important restoration. Commend congregation for supporting restoration and criticize previous generations for neglect. Can hardly see where modified to new liturgy. Where new pieces added, such as the tabernacle and bishop's screen, equal to or better quality of original building. Inspires joy, which is important to carrying it architecturally and appropriate to the whole concept of worship.

Project

St. Benedict's Monastery Retreat Center
Snowmass, Colorado

Father Joseph Boyle, *Liturgical Consultant*

The retreat center is the connection point between the community at large and the silence and conscious spirituality of the monastic community. The monks live a contemplative life and work their 3,000-acre ranch in an undeveloped mountain valley. The center offers the larger community a place for the return of the sacred into everyday life. These ideas are translated into the approach to the center and the design.

A hillside site oriented toward Mount Sopris and overlooking the monastery in the valley was chosen. Thus, visitors would not disturb the monks with their coming and going, and

the center would not be visible until one is well onto the monastery grounds. The main building was divided into three connected structures and eight retreat cabins to reduce the scale. The materials and forms were selected to be reminiscent of ranch and farm structures in the area.

The architects were aware of the tradition of building "sacred" buildings around certain proportions. They used the golden section and the logarithmic spiral frequently found in this architecture and in patterns of organic growth.

Use of operable clerestory windows for natural ventilation, natural gas radiant heating throughout, high-efficient glazing units, and stone veneer established low operating costs and low maintenance buildings.

Jury: On many levels building ensemble has nice appearance of community, which is very appropriate to a monastery. Siting and way buildings integrated are spectacular. Slight shift in the geometry gives natural fit with the environment. Architecture harmonious with historic industrial architecture of Rocky Mountain region. Departure point taken from traditional—in this case Christian—architecture and turned into gluelam expression of something quite contemporary. (Not as easy as it sounds.) Bold sense of permanence.

Project

Connelly Chapel of Holy Wisdom
Washington Theological Union
Washington, D.C.

Andrew D. Ciferni, OPRAEM, *Liturgical Consultant*

Although designed for the seminary's daily Eucharistic liturgy, the singular open neutral space and minimal fixed furniture allow the chapel to also accommodate special ceremonial liturgies, lectures and concerts.

Jury: Admire abstraction of forms in meeting programmatic needs of building. Succeeded at highest level with that. Building goes much beyond program to knit pieces together that are quite unrelated. Eyebrow window gives focus to facade on outside, but on inside altar ambo reads in silhouette. Careful selection of architectural expression that works with the context. Took rather banal set of apartment buildings and captured all of that in the Japanese concept of borrowed landscape where composition is so strong that it grabs all of its surroundings. Chapel composition skillful. Looks so simple, obvious and effortless, but program is very complex. Admire qualities and character of the chapter room: definitive order and clarity, simplicity and directness.

This small chapel is the new and highly visible symbol for an urban Roman Catholic graduate school for ministry. It is part of a larger renovation project involving the transformation of an aging complex of existing structures to accommodate the seminary library, dining hall, classrooms, administrative offices and residential rooms. The chapel, however, is new construction, built over the earlier foundations of a one-story loading dock/maintenance building and connected to the main structure across a small courtyard via a glass passage-way. Elevated above the ground on pale yellow brick walls, the exterior white metal window tracery and bell tower act as a vertical counterpoint to the horizontal retaining wall and trellis stretching back to the main entry lobby portico. The 200-seat interior is a spare spiritual setting of natural maple, white plaster and painted steel, with clerestory light modulated by the deep metal fins into a constantly changing pattern of shadows and light.

Project

Western Presbyterian Church
Washington, D.C.

For nearly 70 years, this congregation had worshiped in a small neighborhood church in downtown Washington, D.C. When high-density office buildings began to surround the church, an offer was made and accepted to trade the church property for a new enlarged church to be constructed on a nearby corner site.

The sense of loss of the old church building was mitigated by the congregation's requirement that, along with greatly expanded new functional support facilities, the new sanctuary replicate the much-loved 1929 Neo-Gothic stone structure. The program also emphasized the need for facilities to support the daily breakfast program for 200 homeless men, as well as an underground parking garage for 50 cars.

A two-story masonry administrative wing and the stone-faced sanctuary form a U-shaped plan that encloses a small courtyard opening onto raised landscaped terraces. Diaper-patterned brick gable facades emphasize entrances and refer back to the texture and color of the rubble stone material. All aspects of the interior and exterior details of the 400-seat

sanctuary space either are restored original components of the old building or are faithful reproductions using modern technology. The interior is a serene evocation of the American Arts and Crafts movement, combining stained oak, limestone and textured plaster.

Jury: Commendable example of how to integrate new with old without destroying delicate architecture or mimicking what was there before. Articulation of facade and interiors evolved through an examination of its own properties through definitive study. Carefully proportioned and lovingly detailed. Corner and entry pieces on front facade are extremely well done. Very urbane. Careful to align with street with corner given prominence. Claims vocabulary as members' own and takes it to an appropriate level. Repetition of gables changing with the program very imaginative.

Project
Saddleback Valley Community Church
Foothill Ranch, California

B.J. Krizanek, *Graphic Consultant*

The church required a built environment free of conventional religious symbols. The building is a reflection of how this congregation chooses to worship—open, casual, experimental and with a strong connection to the outside (natural light, open and airy).

The program expresses itself through simple, elegant building forms composed to create a striking image in the landscape and demonstrate a cost-effective method to enclose space. Till up concrete and off the shelf utilitarian

items were chosen for their speed of erection, combining into an orderly system of construction. The limited use of slate accents gives the church a sense of permanence.

The design alludes to previous temporary structures that housed the church: a gymnasium and tent. The program consists of the sanctuary and utility areas. These spaces are large, solid forms with open spaces and exposed structure (gym). At the entry, a thin, translucent shell (tent) defines the lobby and becomes the scripture wall. The scriptures on the glass curtain wall, chosen by the ministry, reflect themselves on everyone who passes through it.

Jury: Resourceful project. Antecedents met in tents and gymnasiums. Spirituality is about the building in spite of its antecedents. Didn't use usual devices associated with religious architecture that are decorative; rather, used stained glass for the tower that is abstract and sculptural and not at all like the usual church tower. Appealing architecture that is ennobling of the most humble kinds of materials and assemblages. Interrelationship of outside worship spaces in places where people can socialize and congregate in connection with that interior.

Project

Temple Beth Shalom
Hastings-on-Hudson, New York

Temple Beth Shalom is a new 400-family synagogue and religious school. The facility was built on a steep wooded site overlooking the Hudson River, with the new two-story synagogue building designed into the hillside. A central circulation spine running perpendicular to the site slope organizes the various program elements.

At the lower level the entry lobby and formal stair divide the synagogue's administrative offices from the classroom wing. The stair leads to the upper level where the circulation spine separates the sanctuary, library and chapel from the function hall. The concept incorporates a variety of movable walls, which allow spaces to open up to each other. This flexibility was important to accommodate a variety of functions and audience sizes. In addition, clerestory lighting and large expanses of windows in the main sanctuary visually open the space to the building's naturally wooded site.

Jury: Beautiful site carefully attended to and respected. Simplicity of forms that in a straight modernist vocabulary evokes a religious feeling. Site creates feeling of promenade and interaction with contours and light. Building evolved completely from potential of site, which is hard to do and commendable when done well as this is. Careful attention to detailing of component parts. Like choice of materials, combination of detailing, quality of light always there. Good abstract architecture feels evocative to worship without being literal.

Project

Church of Saint Augustine
Ossining, New York

A Gothic revival building was demolished to allow for the widening of a road, forcing the parish to rebuild. The new site is a beautiful park overlooking the Hudson River. This property, originally a convent, has an existing school, parish house and rectory.

The form of the church expresses our interpretation of familiar church iconography. The longitudinal axis of the church runs parallel to the river. The church plan is traditional in organization with an important difference: The front facade is rotated off the longitudinal axis to face the existing entry drive. This device allows the initial view of the church to present the two main facades and the river beyond simultaneously. Pivoting the front facade also provides room for the oversized narthex (really a foyer) requested by the parish

The choice of materials reflects a preference for ones that improve with age—brick walls, mahogany windows, slate roof, copper copings and flashing. Inside, plaster walls painted in warm hues complement the wood. Pews and furnishings are mahogany; the stone altar is Osage granite.

Jury: Siting extremely good. Building fits site well and has commanding presence. Well proportioned. Bold without being assertive. Like references to natural rock formations along that part of the Hudson. Exterior designed to take into account that it forms a major element of the landscape and water—nice that it doesn't really extend above tree line. The response was as close to the statement of purpose as you could get.

Cathedral of the Assumption
Louisville, Kentucky

Father Ronald J. Knott, *Liturgical Consultant*

E.S. Tichenor Company, Louisville, Ky., *Interior Design*

Brown Morton III with Peter Rathbun, Fredericksburg, Va.,

Preservation Consultants

The challenge of this project was to return the building to its original architectural integrity and richness while redesigning it to accommodate modern liturgy. The historical separation between the sanctuary and nave areas was dissolved in favor of designing one undivided space. This was achieved by extending the altar and its platform into the congregation and carrying the finished scheme of the side aisles and nave into the sanctuary. Side altar areas were leveled with the main floor, and the side altars were removed. New doorways were added for functional and accessibility purposes and to pro-

vide a new visual anchor to the ends of the side aisles.

A focal point was the restoration of the Coronation window, which was returned from the bell tower to its original location in the sanctuary. To complement it, side aisle and clerestory windows were replaced with windows following the design of the original windows. Piecemeal changes performed on the building over the years that detracted from the original design intent were removed and replaced with duplications of original work.

The restored Cathedral respects the design intent of the original architect while providing for modern liturgical and functional needs.

Jury: Commend for amount of historical research to find original design and for undoing what previous generations had done. Admirable job of authenticating design, then executing it. Rediscovered what clearly is beautiful building. Interesting relationship between architecture and painting because it was discovered that some of the surfaces are not as they appear. Breathed life back into building, partly due to quality of building, partly due to the intent and efforts to restore.

Project

Joseph Slifka Center for Jewish Life, Yale University
New Haven, Connecticut

On a small site (65' x 85') in the center of the Yale campus, the building was intended to provide for the religious and cultural needs of the Jewish community of students, faculty and staff. Previous facilities were located in basement spaces in obscure corners of the campus.

After years of schematic plans and discussion, an appropriate mix of programmatic spaces was defined to accommodate a broad range of constituencies including the Orthodox, Conservative and Reform branches of Judaism.

Constructed with private funds, the building contains approximately 20,000 sq. ft. on four levels. Facilities include a 275 seat dining hall with separate meat and dairy kitchens; a living room for informal gatherings; a Beit Midrash for daily Orthodox services; a student activity center; a library with pri-

ivate study spaces; rabbi's study; a multi-purpose room for religious services, lectures, concerts, movies, theater, art exhibits and Israeli dancing; and administrative offices. An outdoor

terrace enclosed by a garden wall provides privacy for a permanent 60-seat Sukkah, a symbolic shelter used for taking meals during the religious festival of Succoth in the fall.

An early design premise was to ensure that the building be open and welcoming while allowing multiple activities to occur simultaneously and comfortably.

Jury: The "Roth of God." Admire urbanity of scheme and quiet way it's nestled into setting. Very urban solution to dense complex program. Garden and interior spaces give feeling of sort of a community building. Very noble rooms. Intelligent resolution of difficult program. Lives up to purpose of melding three religious services. The synagogue in America has not found its architectural voice but this goes a long way toward being the solution. Has moral authority to it. Detailing elegant, refined without being fussy—Kahnian. Bold proportions but consistent

Project
 State Botanical Garden Chapel
 Athens, Georgia

Ann & Tim Sutherland, Entry & Lobby Doors
 Libby Sims Patrick, Interior Paint Color & Fabric Selection
 Virginia White, Custom Carpets

The chapel sits in an undeveloped section of second growth hardwood trees on a steep slope overlooking a small stream. The program required a narthex, a sanctuary to accommodate

130 people, a reception hall, and related service areas. The principal intention was to maintain a sensitivity to the site and the craft of the building. Extensive surveys located the building with minimum impact to the environment. The forest remains intact with the chapel making use of the steep contours to step down into the forest, affording sweeping views from within while allowing for a terrace that opens onto the only level area of the site for outdoor gathering.

The building uses native woods, and the native granite base is pulled from the ground for the chapel to rest on. Hand woven carpets, cast metal door pulls, and the large carved glass and wood entrance into the sanctuary emphasize the quality of crafts. The large windows trace the path of the sun by day and turn the chapel into a beacon in the Georgia woods at night.

Jury: Revitalized arts and crafts—not a reinterpretation that's so literal. Architect cared about all connections. Door with tree is stunning—had sense to keep it as only ornate piece. Joinery is appealing but shape of the space has been considered carefully. Took project so far beyond what one thinks of as arts and crafts, especially with the daylighting in ways that clerestory windows work. Made vocabulary their own stunning project.

Project

Brown Memorial Woodbrook Presbyterian Church
Baltimore, Maryland

The two existing buildings on the seven-acre site were built in 1960. The sanctuary was never built, however, and the congregation had been worshipping in the fellowship hall for over 30 years. It was the church's desire to build a new sanctuary to accommodate a growing congregation, to upgrade its facility for handicapped accessibility and oil energy efficiency, and to increase visibility along an adjacent major thoroughfare.

The overall program included a new sanctuary with organ, narthex, tower, connecting walkway, interior renovations and landscape masterplan. The sanctuary is designed both to respect the relatively quiet nature of the existing modern buildings and to create a dramatic and sculptural focus for the entire facility which reaches out to the community.

The architectural concept for the church consists of the relationship between the two main elements—body and roof. The body of the church is a massive, hand-crafted, square brick box. The roof is a delicate, hovering, wood and steel barrel vault, rotated and tilted in relation to the box below.

Within the sanctuary, curving oak pews, radiating aisles and the roof form reinforce the raised chancel area as the focus of community worship. The chancel is located in the corner of the square room, creating a dynamic yet intimate quality. The Holtcamp organ, as a central focus, is a free-standing modern sculptural element within the framework of the sanctuary enclosure. Its sweeping pipes reinforce the central axis of the church and echo the lines of the roof, pews and chancel. The organ also serves as a backdrop for worship in its concave shape, open center and understated detail.

Jury: Impressed with building siting next to existing buildings of earlier period. Material and language of building elevate it considerably. Very lyrical; basic forms made poetic. Admire clarity of concept of roof and walls, separating where the roof is floating as a metaphor to earth and sky. Excellent example of expert collaboration between the organ builder and the architect; the organ feels part of the architecture. Orientation of congregation in circular plan creates strong feeling of traditional nave arrangement but also something unusual. Altar feel is generous; makes parishioners feel a part of service. Elegant plan and execution. Turned nondescript group of buildings into an ensemble.

Project

Window Wall and Ten Stained Glass Windows
Adath Jeshurun Synagogue
Minnetonka, Minnesota

Maurice Finegold, FAIA, Finegold, Alexander & Associates,
Boston, Architect
Warren Olson, Keith Studios, Inc., Minneapolis

The chapel's ten windows, which increase in size, represent the Minyan (ten worshippers needed for prayer). The blue and green "canopy" reflects the idea from the Mishna that morning prayers can begin when congregants see the difference between blue and green. The continuous reamy glass design, which flows from left to right, was inspired by the river of light Abraham is said to have seen. A painted white rectangle the size of the first window is repeated as constant in each window. Like a prayer shawl, it focuses inward

The 18' x 18' window wall entry to the chapel is directly

opposite the ten windows. It is a broad and free design serving as the focal point at the end of a long hallway for people who come to pray. The subject is the Majestic Acts of Creation that shows God's power. Above and around the door an expansive waterfall is painted in tall strokes. The two doors have smaller, more human scale paintings on colorful opal glass: eight intuitive paintings from Genesis and the prayers showing such scenes as the creation of light, mountains, fruit trees, rainbows, grasses and waves

The technique is traditional leaded glass and glass painting though the sensibility is modern. The paints are metal oxides fired in a kiln at about 1200 degrees for permanence. The leaded glass panels were installed in sections in front of normal insulated glass windows, which protect against vandalism and the weather

Jury: Beautiful abstract feeling nonetheless evocative of traditional stained glass. Scope is impressive. Individual units are worked so overall pattern is very detectable and contributes to the shapes of surrounding spaces. Admire the devices used to tie changing width of window from one to the other. Primarily using the white paint vertically serves as architectural solution but also is a symbolic solution that serves expression of theme. Clever connection between the purpose of the room and the exterior environment, which is part of the windows. You can see the lake views become part of the aesthetic and stained glass effectively integrated with architecture. Lyrical quality, soothing. Reinforces notion of worship

Project

Ark Doors, Main Sanctuary
Adath Jeshurun Congregation
Minnetonka, Minnesota

The requirements were to create a pair of 9' x 3' ark doors for the main sanctuary that needed to open by sliding easily side to side, with locks for protection. A wide range of materials could be explored to fulfill these requirements.

The ark, which houses the Torah Scrolls, is the central focal point of both the physical space and the rituals that take place in the synagogue. Our conceptual approach to the design involved an interpretation of the entire Bimah Wall (podium wall) as the open Torah Scroll (Five Books of Moses).

In our concept, the two narrow windows that flank the wall

on either side represent the beginning and the end of Torah. Our design for the windows included the first word of Torah on the upper right and the last word on the lower left.

It followed that the doors would depict the central story, so the text of Shirat Ha Yam (Song of the Sea) became a major element of the design. Most of the text was etched into the metal. For emphasis, three lines of text were cut out of 1/4"-thick bronze and mounted in relief. In addition, the six ribbon elements on each door refer to the 12 passageways through the sea, one for each of the 12 tribes, as described in Midrash (Rabbinic tradition).

These doors function as the portal or gateway to the word of God. They remain closed as protection and open at the appropriate ritual moment to allow access. It is fitting that each time these doors offer access to the word of God, they remind the congregation of that revelatory moment when the sea parted and the Israelite people were led out of the desert to the shores of freedom.

Jury: Beautifully done. Holds up well at reading from distance. Conceptually involves.... Beautiful evocation on abstract level of words on door. Wonderful collaboration of art and architecture. Blend becomes one and the same

Project

Chapel Ark
Adath Jeshurun Congregation
Minnetonka, Minnesota

The requirements were to create a freestanding ark for a chapel unique in its circular structure and containing 10 stained glass windows. Since the ark was to be positioned in front of one of these windows, its design had to be considered as the ark design developed.

The client's choice of materials was glass and stone to relate to the dominant materials in the building. They wanted something that resonated with the old but had a contemporary feeling; that was permanent but looked movable like the original Ark of the Tabernacle.

The ark design is based on a hupah or wedding canopy.

By using it as our reference, we met the requirements of historical and religious resonances. Also, the traditional hupah often is carried during a wedding ceremony, thus filling the second requirement.

In our "hupah ark," we translate the draping of the cloth canopy as a draping metal roof. The intricately knotted fringes are interpreted in the glass as a sandblasted and gold-leafed pattern. Pomegranates are a symbol often associated with weddings for fertility and as a metaphor for abundant knowledge of the Torah. The gold leaf and etched design on the doors are reminiscent of the veil of the bride; a sense that what is hidden is both concealed and revealed.

All of these symbols remind us of both the wedding ceremony and the Sabbath experience, thus informing our design.

Jury: Quality of materials and craftsmanship impressive. Choice of materials appropriate; glow from light source behind. Very evocative of concept in design, craftsmanship, choice of materials and way it fulfills its purpose. The effect of a piece like this cannot be underestimated because it takes something that people can put into the past and bring very much into the present. Effectively depicts a real physical condition and effectively expresses accessibility as well as permanence and protection—an extraordinary challenge to resolve, and this piece does that.

Artist

Joseph O'Connell
(deceased two weeks after sculpture was installed)

Project

Memorial Sculpture based on Matthews: 25
Christ the King Catholic Community
Las Vegas, Nevada

Patricia Walsh, *Liturgical Design Consultant*

Christ as King that would be easy to pass by. The 20,000 lb. triptych of Indiana limestone highlights the Gospel message: Christ astride a donkey is carved into the center and is surrounded by two stones that portray the hungry, the lonely, the sick, the imprisoned, and the dying. It is not easy to ignore the cry of the poor when confronted by this sculpture. The Christ figure is 8' high and 3' wide; the other panels are 7' high by 6' wide, and 4' high by 7' long.

A significant form was needed to highlight the meaning of "church" for the faithful as they entered the liturgical space. As a permanent and prominent feature, the intent of this sculpture was to continue to inspire and give emotional and intellectual sustenance after years of viewing.

The sculpture stands in the courtyard, a link between the parking lot and the church entrance. This parish has an extensive outreach program and did not want a static sculpture of

Jury: Unanimous choice. So full of feeling. So moved by individual figures, particularly the faces. Shows sensitive mind at work and wonderful sense of craftsmanship. The intention of religious art is to unify people and themes into a coherent whole, which he has done beautifully. Unifies people and themes without literal attempt at pulling emotions. Admire honesty of stone—a block that has been carved out, yet something liberates these figures. Tremendous life, true to statement. Sincerity comes through. Faces are evocative and personalized without excessive details.

Books

Sacred Architecture. A.T. Mann. Element, Inc., 42 Broadway, Rockport, MA 01966. Paper, \$18.95.

"When I entered Cornell University School of Architecture, I expected that the secrets of the sacred architects of the ages would be revealed. I wanted just one of them to approach the subject I yearned to understand—the sacred basis of architecture—but none ever did."

The author of those words probably knows that his book will be read with some skepticism by many in the architectural community. He has worked in New York and Denmark where he now practices both as an architect and an astrologer. He believes that not merely the form but the vision of the architect must have common roots in the soul or the spiritual. The spiritual is expressed in architecture that (a) reflects the structure of the cosmos; (b) uses mathematical mysticism; and (c) follows patterns derived from nature (earth, fire and water) in structure and decoration.

Mann traces the history of architecture from early cosmologies to humanism and the disenchantment of Modernism, believing that architecture as an individual pursuit began with the Renaissance. The ensuing conflict between science and spirituality was coincident with the decline of astrology. Prior civilizations and cultures were considered primitive

and inferior, and the beginning of the end of sacred tradition was manifest.

How do we get ourselves out of this dilemma? The cult of the individual must be overthrown, he believes, by making nature and the universe alive once more. Astrology is a world view that invites human participation in the workings of the cosmos and avoids man being a victim of it. His responsibility is to participate in the environment, not to impose control.

You may put this book down still an unbeliever, but you will have been forced to analyze some of your own concepts of the sacred. Illustrations of the text are carefully chosen and are in color.

...

God, Cosmos and Humankind. Gerhart B. Ladner. Translated by Thomas Dunlap. University of California Press, 2120 Berkeley Way, Berkeley, CA 94720. \$45.

This benchmark book is a study of symbolism during the first 500 years of Christianity. The world of the early Christians was one in which everything was seen to be both real and representative of something else.

The author draws upon primary materials to interpret ancient symbols and in so doing illuminates the art and thought world of the period.

...

Seeing and Believing. Frank Kacmarcik and Paul Philibert. The Liturgical Press, St. John's Abbey, PO Box 7500, Collegeville, MN 56321-7500.

This beautiful book brings together 32 religious drawings of Frank Kacmarcik that are nonverbal images that point to faith experience. Frank has been a friend of IFRAA for many years, and his work has been long admired and appreciated. The text by Paul Philibert never presumes to tell the reader what to look for in the drawings, but reflects on his own biblical realities the images point to.

...

The Architecture of the Shakers. Julie Nicoletta. Photographs by Bret Morgan. The Countryman Press, PO Box 175, Woodstock, VT 05091-0175. \$40.

This book explains how architectural designs and standards of Shakers evolved from the specific needs of America's most successful experiment in communal living. It is the first book to have photos from every Shaker community; they are exceptional and are accompanied by a thoughtful history.

...

Specialized Books of Interest

History and Imagery in British Churches. M.D. Anderson. Trafalgar Square, North Pomfret, VT 05053. Paper \$29.95.

Reference book for all those who visit

British churches (art and architecture)
Opens eyes to Medieval life

Cathedrals of England, Scotland and Wales. Paul Johnson. Trafalgar Square, North Pomfret, VT 05053

Examines the role of the cathedral, the changing influences of the cathedral building, and the skill of architectural workers

Victorian Churches. James Steven Curl. Trafalgar Square, North Pomfret, VT 05053. Paper \$29.95

Churches are a visible expression of the importance of religion in Victorian England. Wide range of architectural style

A Celebration of Death. James Steven Curl. Trafalgar Square, North Pomfret, VT 05053. Paper \$39.95

Covers a wide range of chronology and geographical area and includes rich cemeteries from the 18th century—British, French, Italian, etc

Spiritual Path, Sacred Spaces. Thomas Barrie. Shambhala Publications Inc., 300 Mass Ave, Boston, MA 02115

Reminds us that buildings acquire their meaning only when they reverberate in their shapes the deeper stirrings of human nature

Architecture and the After-Life. Howard Calvin. Yale University Press, PO Box 209040, New Haven, CT 06520-9040. \$65

A history of funerary architecture in

western Europe from pre-history to 19th century public cemeteries. Summarizes most recent research on funerary architecture. 268 illustrations + extensive bibliography

Monasteries of Western Europe. Wolfgang Braunfels, Thomas & Hudson, 500 Fifth Avenue, New York, NY 10110. \$34.95

Only available book to deal comprehensively with the rewarding tradition of monastic architecture throughout the whole of its history. 285 illustrations

Architecture of the Islamic World—Its History and Social Meaning. George Mitchell, Ed. Thomas & Hudson, 500 Fifth Ave, New York, NY 10110. \$29.95

A panoramic survey of the entire field of Islamic architecture. Articles by leading experts in the field. 758 illustrations

The Mosque. Edited by Martin Frishman & Hasan-Uddin Khan. Thomas & Hudson, 500 Fifth Avenue, New York, NY 10110. \$50

Sixteen eminent scholars trace the history and development of the mosque since its beginning to today. Traditional religious teachings as well as architecture and decorative features are explained. Invaluable guide to understand museum's role in society and culture throughout the world

Sanctuaries of Spanish New Mexico. Marc Treib. University of California Press, 2120 Berkeley Way, Berkeley, CA 94720

These churches are among the oldest in the U.S.—1600-1829. They are both

religious symbols and products of a frontier economy and Indian provincial variations on Mexican baroque. They are being continually rebuilt in this century

The Gothic Revival. Kenneth Clark. Trafalgar Square, North Pomfret, VT 05053. Paper \$24.95

Best introduction to widespread and influential architecture and decorative arts movement England has provided. Unappreciated in first half of this century, now a revival explores changes in ideals and sensibilities

Fortifications and the Synagogue. (Ben Ezra Synagogue, Cairo) Edited by Phyllis Lambert. Distributed by Trafalgar Square, Pomfret, VT 05053. \$65. □

IN THE CROSS OF
THE MILLENNIUM,
FREDERICK HART
ILLUMINATES OUR
HOPES, EVOKES
OUR DREAMS, AND
GIVES LIGHT TO
THE DARKNESS.

THE CROSS OF THE MILLENNIUM FREDERICK HART

In a vision of light, this historic masterwork celebrates the birth, death and resurrection of Christ. And now, for a limited time, it is possible and affordable to incorporate this spiritually significant work into your worship space.

The Cross of the Millennium is dedicated to the 2,000 year anniversary of Christ's birth. It was created by master American sculptor Frederick Hart, whose achievements include the *Processional Cross* for Pope John Paul II's historic 1979 visit to the United States, *The Creation Sculptures* at The Washington National Cathedral, and the *Three Soldiers* at the Vietnam Veterans Memorial.

To learn how your church or organization can own this inspirational work through our unique self-funding offer, please call Madeline Kisting at 1-800-999-4119.

Chesley

190 SHEPARD AVENUE, WHEELING, ILLINOIS 60090 800 999 4119
